

## CHP Max<sup>®</sup> CORView<sup>™</sup> 2.5

### Element Management System for CHP Max5000

- Intuitive, user –friendly Graphical User Interface (GUI)
- Management of up to 300 CHP Max5000 SMMs from a single server
- Remotely launched through standard web browser via Java Web Start technology
- Software downloading automates firmware updating of the CHP Max5000 equipment
- Provides
  - Configuration and Topology Management
  - Fault and Alarm Management
  - Security Management

The CHP Max CORView 2.5 Element Management System, is the latest version of element management software for the CHP Max5000 family of products. CORView 2.5 is a distributed client/server application using the Java Web Start technology. The client application launches remotely from a standard web browser. CORView 2.5 provides an intuitive and user-friendly interface for management of configuration, topology, security, discovery, and inventory functions for headend modules, including transmitters, receivers, amplifiers, etc., with a single server.

#### Features

##### Configuration and Topology Management (headend and hub)

- Auto discovery and display of headend and hub CHP modules by user
- Inventory search and user-generated reporting capability
- Configuration dialog allows set up and control of optical and RF parameters
- Generate various inventory reports by module name, type, firmware revision etc.
- Software downloading assures that the CHP Max 5000 firmware is always current

##### Fault and Alarm Management

- Determines fault conditions in the network by proactive polling and asynchronous SNMP traps
- Alarm indicators and alarm status indicated by the GUI client and updated in real time
- Generate alarm history report from historical alarm database

##### Security Management

- User authentication , authorization, and function restriction
